

Our "Cube Cases" are designed to carry and protect virtually any equipment that will fit into the two available sizes. Heavy duty zippers, and web buckles, and integrated web handles make this case a favorite for laser printers, rack size components, multiple laptops, pedals and other gig gear, including cables. The Cube Case line feature a zippered front opening in addition to the top flap, which allows the placement of heavier items such as laser printers from the front in, rather than struggling to lower a larger item down into the bag. It also allows access to rack mounted equipment which could stay in the bag while being used.

Softlite wants to be your "working mobility" solution, by providing a quality line of products designed to protect your assets while presenting your business in a professional and stylish manner. Our resilient soft side cases are designed to carry everything from 42" flat screen displays to laser printers, and are available in sizes that can be used for virtually any product that requires ease of transport while maintaining a good measure of light transport protection

All of our products are designed by A/V/Computing professionals who are keenly aware of the mobility and asset protection requirements that the industry demands, and the Softlite line of Heavy Duty Fabric Cases are the first offerings to meet this demand.

Our flat cases offer a great space saving storage solution for flat panel TV's up to 42", as well as a great short haul transportation solution. Built wide enough to allow many mounting brackets to stay on the panels, saving time at the install location.

Dual function is provided by the bag by simply turning it upside down and placing over a plasma/LCD TV that is mounted on a stand. It instantly becomes a heavy duty protective cover, minimizing any impact that the mounted screen may encounter when being rolled to a different location.

A top handle is provided for movement by one person, but end straps allow a convenient method of carry by two people, as well as an easier means to slide into and out of equipment shelves at the warehouse, or the transporting vehicle.
